EXPERIENCE

Founding Engineer

Aug 2024 — Present

Nevoya

Los Angeles, CA

- Founding engineer for an AI-native EV trucking logistics platform, building the core FastAPI, React, Postgres, and AWS architecture from zero to live fleet operations supporting 50+ trucks
- Architected and deployed a production multi-agent runtime on AWS Bedrock AgentCore, automating dozens of manual workflows across dispatch, fleet monitoring, and billing with human-in-the-loop approvals, auditability, and escalation paths
- Built an in-house dispatch optimization engine with Google OR-Tools CP-SAT, cutting daily dispatch planning from 3 hours to 10 minutes and increasing truck utilization by packing more loads per shift under hours-of-service, shift-duration, and load-priority constraints
- Delivered Gemini-powered rate confirmation parsing that extracts load details from PDFs via geocoding, fuzzy matching, and data deduplication, cutting manual load-entry entirely and letting ops onboard new loads in seconds instead of hand-keying each one
- Established production infrastructure end to end, building Terraform-managed AWS and GCP environments, CI/CD pipelines, continuous deployment, and observability

Senior Software Engineer

Aug 2020 — Aug 2024

Benchling

San Francisco, CA

- Technical lead for a 6-person platform team, owning roadmap planning, architecture design, and execution across domain modeling and notebook infrastructure initiatives
- Led Domain Graph, a company-wide platform that let product teams define, document, and ship external-facing data models from a single source of truth
- Built tooling to auto-generate internal and external REST and GraphQL APIs from those definitions, saving 6+ months of engineering effort and accelerating the launch of a new bioprocess product
- Redesigned notebook spreadsheet evaluation and caching, reducing P90 load times from up to 3 minutes to under 1 second
- Architected a large-scale Postgres migration and backfill across 11B rows using Celery distributed jobs, completing the migration without disrupting production workflows
- Enabled real-time, multi-user notebook collaboration (up to 50 concurrent editors per document) by designing a new WebSocket architecture, unblocking new product verticals and serving 200k+ scientists
- Co-inventor, US Patent 12,555,651, *Bioprocess Execution Workflow Interfaces*

Software Engineer

Jul 2019 — Aug 2020

Uber

San Francisco, CA

- Implemented a financial ledger service for \$1B+ in Uber Cash balances using Kafka, Cassandra, and Docstore, improving reliability and transaction performance
- Built a migration service that moved millions of users to the new ledger with zero downtime and no user-facing impact
- Designed a reporting service that compiled daily transaction data across legacy and new ledgers for partner banks, unblocking \$106M in revenue

EDUCATION

UC San Diego

San Diego, California

Bachelor of Science in Mathematics and Computer Science, Cum Laude

Aug 2015 — Jun 2019

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, SQL, Go, Java, C++
- **Frameworks/Data:** FastAPI, React, SQLAlchemy, PostgreSQL, GraphQL, Celery, OR-Tools, PyTorch
- **Infrastructure:** AWS ECS, Lambda, SQS, Bedrock, GCP, Docker, Terraform, Datadog, Sentry
- **Interests:** Coffee Roasting, Running
